Case Study: Banking Application – Positive Test Scenarios and Test Cases

Aim:

To design and execute positive test scenarios and test cases for a Banking Application to verify that valid banking operations are performed correctly and securely.

Problem Description

A banking application allows customers to securely log in, view account balances, transfer funds, make permitted transactions, and view transaction history. The application must validate credentials, transaction limits, account balance, beneficiary details, and transaction status. The testing team is responsible for verifying whether the application works correctly under valid and invalid conditions. They must prepare positive and negative test cases and document any defects identified during testing.

Functional Requirements

1. Customers must log in with valid credentials.

2. Account balance must be displayed correctly.

3. Valid fund transfers must be processed.

4. Transfers must not exceed available balance or configured limits.

5. Valid beneficiary and transaction details must be accepted.

6. Transaction confirmation requires successful authorization.

7. Invalid inputs must display appropriate error messages.

2. Positive Test Cases

Positive testing verifies whether the application works as expected when valid inputs are provided.

Test Case ID	Test Scenario	Test Input / Action	Expected Result	Status
PT01	Login with valid credentials	Valid customer ID and password	Customer dashboard displayed	Pass
PT02	View account balance	Open balance section	Correct balance displayed	Pass
PT03	View transaction history	Open transaction history	Previous transactions displayed correctly	Pass
PT04	Add valid beneficiary	Valid beneficiary details	Beneficiary added successfully	Pass
PT05	Transfer valid amount	Valid beneficiary and sufficient balance	Transfer completed successfully	Pass

PT06	Verify transaction reference	Complete successful transfer	Unique transaction reference displayed	Pass
PT07	Logout	Click logout	Session terminated	Pass
PT08	Download transaction statement	Select valid date range	Statement generated correctly	Pass

3. Conclusion

The positive test cases verify that the Banking Application performs its required operations correctly when valid inputs and conditions are provided.
