EXPERIMENT 11

Railway Reservation System – Positive Test Case Study

Domain: Railway Reservation System

1. AIM

To identify and analyze the requirements of a Railway Reservation System and prepare positive test scenarios and test cases.

2. PROBLEM STATEMENT

A Railway Reservation System allows passengers to search trains, select journey dates and classes, enter passenger details, make payment, and receive booking confirmation. Positive testing verifies successful operations with valid inputs.

3. SOFTWARE REQUIREMENT SPECIFICATION (SRS)

S.No.	Requirement
1	Users must search trains using valid source, destination and journey date.
2	Available trains and classes must be displayed.
3	Passenger details must be valid.
4	Booking is confirmed only after successful payment.
5	Eligible bookings must support cancellation according to rules.
6	Booking history must display correct information.

4. DEFECT REPORT

Defect ID	Defect / Scenario	Expected Result	Actual Result	Severity	Status
PT01	Search available trains	Valid source, destination and date	Available trains displayed	Pass	
PT02	Select available class	Choose available class	Class selected successfully	Pass	
PT03	Enter passenger details	Valid name, age and gender	Passenger details accepted	Pass	
PT04	Select available berth preference	Choose available preference	Preference accepted	Pass	
PT05	Make successful payment	Valid payment details	Payment succeeds	Pass	
PT06	Confirm ticket	Successful payment response	Ticket/PNR generated	Pass	
PT07	View booking history	Open previous bookings	Correct bookings displayed	Pass	
PT08	Cancel valid booking	Select eligible booking	Booking cancelled and refund information shown	Pass	

5. RESULT

The Railway Reservation System requirements were analyzed and the positive test cases were prepared.
