EXPERIMENT 2

Case Study: ARMS Portal – Positive Test Scenarios and Test Cases

Aim:
To design and execute positive test scenarios and test cases for the ARMS Portal to verify that valid inputs and operations produce the expected results.

Problem Description

An ARMS Portal allows students to log in, view their academic profile, check attendance and marks, access academic information, submit permitted requests, and view notifications. Students must provide valid credentials and the portal must validate mandatory fields and access permissions before processing requests. The testing team is responsible for verifying whether the application works correctly under valid and invalid conditions. They must prepare positive and negative test cases and document any defects identified during testing.

Functional Requirements

1. Users must log in using valid credentials.

2. Students must be able to view correct profile information.

3. Attendance and marks must be displayed accurately.

4. Only permitted academic requests can be submitted.

5. The portal must display appropriate error messages for invalid inputs.

2. Positive Test Cases

Positive testing verifies whether the application works as expected when valid inputs are provided.

Test Case ID	Test Scenario	Test Input / Action	Expected Result	Status
PT01	Login with valid credentials	Registered username/email and correct password	User logs in successfully	Pass
PT02	View student profile	Login and open profile	Correct student details displayed	Pass
PT03	View attendance	Open attendance section	Attendance details displayed correctly	Pass
PT04	View marks	Open marks/academic performance	Correct marks displayed	Pass
PT05	Submit valid academic request	Enter all valid mandatory details	Request submitted successfully	Pass
PT06	View notifications	Open notification section	Relevant notifications displayed	Pass
PT07	Logout	Click Logout after login	Session ends and login page displayed	Pass

PT08	Access portal on valid session	Login with active account	Authorized dashboard displayed	Pass

3. Conclusion

The positive test cases verify that the ARMS Portal performs its required operations correctly when valid inputs and conditions are provided.
