Case Study: Food Delivery Application – Positive Test Scenarios and Test Cases

Aim:

To design and execute positive test scenarios and test cases for a Food Delivery Application to verify that valid ordering and delivery operations function correctly.

Problem Description

A food delivery application allows customers to register, log in, search restaurants and food items, add items to a cart, enter a delivery address, and place orders. The system must validate item availability, quantity, address, delivery coverage, and payment before confirming an order. The testing team is responsible for verifying whether the application works correctly under valid and invalid conditions. They must prepare positive and negative test cases and document any defects identified during testing.

Functional Requirements

1. Users must register/login with valid details.

2. Restaurants and menu items must be searchable.

3. Only available food items can be ordered.

4. Quantity must be greater than zero and within available limits.

5. A valid delivery address is required.

6. Order confirmation requires successful payment.

7. Invalid inputs must show appropriate error messages.

2. Positive Test Cases

Positive testing verifies whether the application works as expected when valid inputs are provided.

Test Case ID	Test Scenario	Test Input / Action	Expected Result	Status
PT01	Register customer	Valid name, email, password and mobile	Account created successfully	Pass
PT02	Login	Valid registered credentials	Customer logged in	Pass
PT03	Search restaurant	Search for a restaurant name	Relevant restaurant displayed	Pass
PT04	Add available food item	Select available item	Item added to cart	Pass
PT05	Update food quantity	Increase quantity within allowed limit	Cart quantity and total updated	Pass
PT06	Enter valid delivery	Valid address within	Address accepted	Pass

	address	delivery area		
PT07	Place order with successful payment	Valid cart, address and payment	Order confirmed with order ID	Pass
PT08	View order status	Open active order	Current delivery status displayed	Pass

3. Conclusion

The positive test cases verify that the Food Delivery Application performs its required operations correctly when valid inputs and conditions are provided.
